

Tzinr Brand Guidelines & Website System

Oct 5, 2026 · @Trinath

Brand foundation

Tzinr is a one-person AI UGC ad studio for Indian D2C brands, and every brand choice serves one promise: product first, honest AI.

Element	Definition
What we are	A studio that turns one product into one short, product-first vertical ad, directed by a human and produced with AI
Who we serve	Founders and marketing leads of Indian beauty, fashion and fitness D2C brands
Promise	Product first, honest AI
Personality	Precise, warm, direct, quietly confident
Creator	Aanya, our fictional AI creator, presented openly as AI
Signature idea	The vertical 9:16 frame. Our work lives on phones, so the phone frame is our recurring visual motif, not a decoration
Visual world	Black studio, white type, marigold for action, peacock for depth: festive India seen through a phone screen

One rule decides close calls: if a choice makes the product harder to see or the AI less obvious, it is off-brand.

Logo

The logo is the TZINR wordmark with the pen-nib "I"; the nib says scripted and directed, so it is never removed or swapped.

Rule	Spec
Primary version	Chalk wordmark on Ink
Secondary version	Ink wordmark on Chalk
Accent use	Never colour the whole wordmark Marigold or Peacock
Clear space	The height of the nib on every side
Minimum size	24 px tall on screen, 10 mm in print
Profile photo	Wordmark only, about 70% of the circle width, no tagline
Favicon	The nib "I" alone on Ink, 32 × 32 px
Files	logo.svg , logo-ink.svg , nib.svg

Don'ts:

- No gradients, glows, shadows or outlines on the wordmark
- No stretching, rotating or re-spacing the letters
- No tagline locked under the wordmark at small sizes
- No placing it on busy video frames without an Ink scrim behind it

Colour

Six colours, used by role and ratio: Ink and Chalk carry the brand, Marigold means "do this", and Peacock adds depth so the site isn't only black.

Name	Hex	Role	Share of screen
Ink	#000000	Main background, true black like the logo	65%
Chalk	#FAFAF7	Headlines, body on dark, light sections	18%
Peacock	#0E4D4F	One feature band per page (How it works), tags	8%
Graphite	#161616	Raised surfaces: cards, phone frames	5%
Smoke	#8C8C8C	Secondary text, captions, metadata	2%

Name	Hex	Role	Share of screen
Marigold	#F4A51C	Primary buttons, step numbers, focus rings only	2%

Support tones: Line #2A2A2A for borders on Ink; Marigold Hover #FFC14D.

Contrast (checked against WCAG AA):

- Chalk on Ink: 20.1:1
- Smoke on Ink: 6.2:1, fine for body text, never below 14 px
- Chalk on Peacock: 9.2:1
- Ink on Marigold: 10.2:1, so button text is always Ink, never white

Rules:

- Marigold is never decoration: no Marigold headlines, borders or backgrounds except the closing CTA card
- One Peacock band per page, maximum
- No gradients between brand colours
- Ad frames keep their own colours; never tint or filter the work

Typography

Two families from Google Fonts: Bricolage Grotesque for the voice, Instrument Sans for reading. Both are free for commercial use.

Role	Typeface	Weight	Size (desktop / mobile)	Line height	Tracking
Hero headline	Bricolage Grotesque, optical size 96	800	96 / 48 px	0.98	-2.5%
Section heading	Bricolage Grotesque	800	56 / 34 px	1.02	-2%
Card and step title	Bricolage Grotesque	700	24 / 21 px	1.15	-1%
Lead paragraph	Instrument Sans	400	20 / 18 px	1.55	0
Body	Instrument Sans	400	17 / 16 px	1.6	0
Button	Instrument Sans	600	16 / 16 px	1	0
Caption, metadata	Instrument Sans	500	14 / 13 px	1.4	+1%

The scale steps by 1.25 (major third) from a 17 px base, so every size relates to the next.

Rules:

- Sentence case everywhere, including buttons and navigation; no all-caps labels
- Headlines left-aligned, maximum 12 words, never one word in a different colour or italic
- Body lines under 70 characters
- Numbers in headings use the display face; prices always written as ₹1,549, never "Rs"
- Fallback stacks: "Bricolage Grotesque", "Arial Narrow", Arial, sans-serif and "Instrument Sans", "Helvetica Neue", Arial, sans-serif

Layout, spacing and shape

A 12-column grid with an 8 px spacing base; content is left-aligned and the 9:16 frame is the only repeated shape.

Token	Value
Max content width	1180 px
Columns / gutter	12 / 24 px desktop, 4 / 16 px mobile
Page side padding	24 px
Spacing scale	8, 16, 24, 32, 48, 64, 96, 128 px
Section padding	128 px desktop, 80 px mobile
Breakpoints	560, 900, 1180 px

Radius has meaning, so it is not one value everywhere:

Element	Radius	Why
Phone frame (ad thumbnails)	26 px	Mimics a real phone corner
Ad card poster	18 px	A crop of the frame
Panels (niches, Aanya photo)	22 px	Softer containers
Buttons	Full pill	Tap targets, clearly different from content
Feature bands	0	Full-bleed sections read as chapters

The 9:16 frame motif:

- Every piece of work is shown in a 9:16 frame, never cropped square
- Phone frames use a 6 px Graphite bezel and no fake notch or buttons
- Frames may tilt up to 9 degrees in the hero fan only; everywhere else they sit straight
- Minimum tap target 44 × 44 px; keep text and buttons out of the bottom 80 px on mobile, where the browser bar sits

Imagery and video

The work is the only imagery: real frames and loops from posted ads, never stock photos or decorative AI art.

Asset	Format	Size	Rule
Ad thumbnail	JPG or WebP, 9:16	540 × 960 px, under 120 KB	Pick a frame where the product is sharp and large
Hover / hero loop	MP4 (H.264) + WebM, muted, no audio track	3–4 s, 540 × 960 px, under 1.2 MB	Starts and ends on a near-identical frame so it loops cleanly
Aanya portrait	JPG, 4:5	800 × 1000 px	Always next to the line saying she is AI
Open Graph image	JPG	1200 × 630 px	Wordmark plus one ad frame

Rules:

- Only show ads whose product is accurate; an ad with a wrong shade or design never goes in the portfolio
- Every concept ad carries a small "Concept ad" tag; paid work carries the client's approved label
- No filters, colour grading or overlays on ad frames
- Thumbnails come from the hero shot or macro moment, never a talking-head frame
- Google's AI sparkle watermark stays in the loops if the source has it; never remove it

Voice and copy

We write like a calm creative director: plain words, short sentences, specific claims, no hype.

Do	Don't
"Get a free sample ad"	"Unlock viral growth now!"
"Product-first vertical ads"	"Revolutionary AI-powered content solutions"
"Every ad is labelled AI-generated"	Hiding or softening the AI part
"The brand says it's 6 mm"	"It's the thickest mat you'll ever need"
Show the work, then the offer	Stats, client counts or results we don't have

Rules:

- Buttons say exactly what happens: "Get a free sample ad", "Watch on Instagram", "Email us"; the same action keeps the same words everywhere
- Banned words: viral, revolutionary, guaranteed, best, #1, perfect, game-changer, unlock, supercharge
- No testimonials, client logos or numbers until they are real and permitted
- AI disclosure appears in the hero note, the Aanya section and the footer
- Promises are only ones we keep: no turnaround time on the site until it has been met five times

Motion principles

Motion behaves like a video edit: quick cuts, clean easing, and movement only where it shows the work or answers the visitor's action.

Token	Value	Use
Fast	180 ms	Hover, focus, button states
Base	320 ms	Open/close, swaps, menu
Slow	700 ms	The one hero load sequence
Ease out	<code>cubic-bezier(.2, .8, .2, 1)</code>	Things arriving
Ease in-out	<code>cubic-bezier(.65, 0, .35, 1)</code>	Things moving across the screen
Stagger	80 ms	Lines or frames in one sequence

Principles:

1. One orchestrated moment per page: the hero. Nothing else animates on load.
2. Video plays only when it earns attention: on hover (desktop), when centred on screen (mobile), or in the hero.
3. Scroll-linked motion only where content is a real sequence, such as the four steps.
4. Every motion has a still version: with `prefers-reduced-motion: reduce`, loops become posters and scroll effects become static.
5. Animate only `transform` and `opacity` to keep 60 fps on mid-range Android phones.
6. Never animate text the visitor is trying to read.

Animation spec by section

Nine sections, each with one job for motion; the hero and the work rail carry the signature, everything else stays quiet.

Section	Trigger	What moves	Timing	Built with	Reduced motion
Navigation	Scroll	Bar hides on scroll down, returns on scroll up; CTA turns solid Marigold once the hero CTA leaves the screen	320 ms ease out	CSS + small JS	Bar stays visible
Hero	Page load, once	Headline lines rise from behind a mask, 80 ms stagger; three phone frames deal in like cards; centre frame then plays its 3 s muted loop	700 ms total, loop after	GSAP timeline	Static headline and poster frames
Hero (desktop)	Pointer move	Fan tilts up to 4 degrees toward the pointer	Follows pointer, 180 ms damping	GSAP quickTo	Off
Latest on Instagram	Hover or focus (desktop); card centred in view (mobile)	Poster swaps to the card's muted loop; play badge scales 1 → 1.08	180 ms swap	Native <code><video></code> + IntersectionObserver	Posters only
Latest on Instagram	Drag or swipe	Rail scrolls with momentum and snaps to cards	Native scroll snap	CSS scroll-snap	Same
How it works (Peacock band)	Scroll through the section	A Chalk line fills left to right across the four steps; each number turns Marigold as the line reaches it	Scrubbed to scroll	GSAP ScrollTrigger	Line full, numbers Marigold
What we make ads for	Hover or focus a niche	That panel's background fades to a dimmed loop from that niche; text stays fixed	320 ms	CSS opacity + <code><video></code>	Still frame

Section	Trigger	What moves	Timing	Built with	Reduced motion
Meet Aanya	Enters view, once	Portrait sharpens from 6 px blur to 0, like a focus pull	700 ms ease out	CSS transition + IntersectionObserver	Sharp from start
Questions	Click or Enter	Answer height opens, plus sign rotates to a cross	320 ms	<details> + CSS	Instant open
Closing CTA	Pointer near button (desktop)	Button drifts up to 6 px toward the pointer	180 ms	GSAP quickTo	Off
Footer	None	Nothing	—	—	—

All loops are muted, `playsinline`, `preload none`, and pause when off screen.

Tech stack

Start with what ships this week, and move up a phase only when its trigger is met.

1. **Now: live this week.** Trigger: none. The site you already have.
2. **Next: the designer-developer build.** Trigger: 5 posted ads, before brand outreach starts.
3. **Later: the agency system.** Trigger: 3 paying clients or 20 posted ads.

Tool	Job	Phase	Cost
HTML, CSS, vanilla JS (one file)	The current site	Now	Free
Google Fonts	Bricolage Grotesque, Instrument Sans	Now	Free
Netlify	Hosting, HTTPS, custom domain	Now	Free tier
Manual <code>WORK</code> list	Instagram top 5	Now	Free
WhatsApp click-to-chat (wa.me)	Lead capture	Now	Free
Cloudflare Web Analytics	Privacy-friendly visit counts	Now	Free

Tool	Job	Phase	Cost
GitHub	Code history, deploys to Netlify on every push	Next	Free
Astro	Component-based static site, near-zero JavaScript by default	Next	Free
GSAP + ScrollTrigger	Hero sequence, step line, pointer effects	Next	Free
Astro content collections	One file per ad (title, niche, thumb, loop, Instagram URL)	Next	Free
Decap CMS	Add ads from a browser form instead of editing code	Next	Free
Netlify Forms	"Request a free sample" form: brand, product link, WhatsApp	Next	Free tier
Self-hosted MP4/WebM loops	Hover and hero previews	Next	Free
Instagram Graph API + Netlify Function	Auto-pull the latest 5 Reels (needs a Business account linked to a Facebook Page and a token refresh about every 60 days)	Later	Free, your maintenance
Cal.com	Book a call	Later	Free tier
Razorpay payment links	Collect payments	Later	Per-transaction fee
Bunny Stream or Cloudflare Stream	Video hosting once loops get heavy	Later	Low monthly
Meta Pixel + GA4	Retargeting and conversion tracking, behind a consent banner (India's DPDP Act)	Later	Free

Design source of truth: a Figma file with these colours, type styles and spacing as variables, mirrored as CSS custom properties in the code.

Build rules

The site must load fast on a mid-range Android phone on 4G, because that is where Indian brand owners will open it.

Budget	Target
Largest Contentful Paint	Under 2.5 s on mobile 4G
Total page weight on first load	Under 1.5 MB (loops load on demand)
JavaScript	Under 60 KB gzipped, GSAP included
Lighthouse (mobile)	90+ for performance, accessibility, SEO
Each video loop	Under 1.2 MB

Accessibility floor:

- Visible Marigold focus ring on every link and button
- Every video muted, with a poster and no meaning that depends on sound
- Alt text on every thumbnail naming the product
- Works fully with JavaScript turned off, minus the motion

What we never do, because it reads as an AI template:

- Fade-and-slide-up on every section
- Custom cursors, particle backgrounds, gradient blobs, glassmorphism cards
- Smooth-scroll hijacking
- Typewriter headlines or one highlighted word in a headline
- All-caps eyebrow labels above every heading
- Stock photos, fake testimonials, invented stats or client logos
- Any motion that hides the product
